WORK EXPERIENCE

Software Engineer

Base Automation pvt ltd, Chennai

10/2021 - 03/2023

Web-Based Log Management Application

Technology: Ignition Perspective, Python, MS SQL

Roles & Responsibilities:

- Designed and developed **350+ interactive forms** in Ignition Perspective, with each form mapped to a corresponding SQL database table. Built intuitive **UI layouts** for data entry, retrieval, and management
- Implemented backend logic using **Python scripting within Ignition** to handle CRUD (Create, Read, Update, Delete) operations on SQL data. Developed and optimized **SQL stored procedures** for reporting and auditing purposes. Generated **custom reports** for each log/record, leveraging saved form data for auditing and compliance.
- Designed a **consolidated dashboard** to provide department-wide summaries, filterable by time periods, for management insights. Troubleshot and resolved issues in existing forms while handling **enhancement and change requests**

Software Engineer

JUDO Nxt private limited, Chennai

01/2025 - Present

React & Node.js Projects

Technologies: React, Node.js, Express, MongoDB, Ant Design, Day.js

Roles & Responsibilities:

- Designed and implemented **complex frontend UIs** in React with **Ant Design**, including dashboards, dynamic forms, searchable trees, and conditional rendering. Built **RESTful APIs** in Node.js/Express with advanced **MongoDB aggregation pipelines**
- Optimized API performance, reducing response time from **10+ seconds to ~2-3 seconds** through pipeline restructuring and indexing. Implemented **role-based access control (RBAC)** to manage suppliers, contracts, groups, and user permissions. Handled **date and timezone issues** end-to-end (React frontend with Day.js + backend MongoDB \$dateToString) ensuring consistency across CRUD flows.
- Developed **cron scheduling logic** for action management, dynamically generating cron expressions from user inputs. Built **clone, create, edit, and draft flows**.
- Implemented **search functionality with supplier-first and contract-fallback logic**, using optimized MongoDB queries to handle large datasets efficiently. Designed **consolidated dashboards** showing counts (open, overdue, upcoming, execution status) computed via real-time backend aggregation.
- Troubleshot and fixed **critical frontend-back-end sync issues**, including data duplication, form resets, and conditional rendering bugs. [multi-stage \$lookup, \$group, pagination, filtering, and dynamic projections]

EDUCATION

Bachelor of Engineering

Sri Krishna College of Technology, Coimbatore

08/2016 - 03/2020

7.69

SKILLS

HTML

CSS

JavaScript

React Js

Node js

.NET

MongoDB

CERTIFICATES

Full Stack Developer on GUVI GEEK (08/2023 - 03/2024)

Completed the course as the Full stack development
